

Cryptotaku project characteristics

-NFT collectible cards (**ERC1155**).

-Cards are representing original characters (at the start 3, but more will be added later) in various graphical styles and poses with some pop culture references (memes, animes, etc...)

-The cards are sorted by a rarity score that goes from 1 to 5 stars, 1 is common, 5 is legendary.

-Of course the designs are paid to the artists before being “converted” to a new card + 30% of the profits of a given card will be redistributed to the artist, it’s an important thing for us.

-The cards will be firstly listed at a given price and generated in a given fixed quantity depending on their rarity as below :

Rarity -> Generated quantity -> Initial sell price

Common -> 1000 -> 25\$

Rare -> 750 -> 50\$

Super Rare -> 500 -> 75\$

Ultra Rare -> 250 -> 125\$

Legendary -> 100 -> 175\$

-This document is subject to change because we think about new ideas and features to add.
